

BSC APES WHITEPAPER

BSC APES ICO and Distribution

Interested investors can buy into an initial coin offering to receive the allocated 20% BSC APES cryptocurrency token issued by the BSC APES Team. This token roadmap have some utility related to the product or service that the Team is offering

Initial coin offerings is to raise funds for products and services related to BSC APES Token project.

ICOs are similar to initial public offerings, but coins issued in an ICO can also have utility for a software service or product.

To participate in an ICO, you usually need to first purchase an amount of BSC APES established digital Token.

Listing Information

Social Listing:

1. Coingecko Platform Listing
2. Coin Market cap Listing
3. Coin watch website Listing
4. Coin Mooner website Listing
5. Bit query website Listing
6. meduim Token Informaton publishing

Dex Listing:

1. Pancake Swap
2. Feg Exchange
3. Dy/Dx exchange
4. Honey swap Exchange
5. Juli swap Exchange
6. Dojoswap Dex

Centralized Exchange Listing:

1. Hotbit Exchange
2. Kucoin Exchange
3. CoinEx exchange
4. Binance Exchange

Contract Information

The BSC APES smart contract is a computer program or a transaction protocol which is intended to automatically execute, control or document legally relevant events and actions according to the BEP20 Token standard agreement.

The objectives of the BSC APES smart contracts are the reduction of need in trusted intermediators, arbitrations and enforcement costs, fraud losses, as well as the reduction of malicious and accidental exceptions.

Similar to a transfer of value on a Blockchain coin, deployment of a smart contract on a blockchain occurs by sending a transaction from a wallet for the blockchain.

The bytecode includes the compiled code for the BAPE smart contract as well as a special receiver address called the contract address. That transaction must then be included in a block that is added to the Binance BEP20 blockchain, at which point the smart contract's code will execute to establish the initial state of the smart contract [BAPE].

Byzantine fault-tolerant algorithms secure the smart contract in a decentralized way from attempts to tamper with it..

Our Smart contracts on BEP20 blockchain can store arbitrary state and execute arbitrary computations.

Our countract is verified under BSCSCAN website, End clients interact with a smart contract through transactions. Such transactions with a smart contract can invoke other smart contracts.

Token Name: BSC APES
Token Symbol: BAPE
Blockchain: Binance BEP20
Supply: 500,000,000,000 BAPE
